

building a sustainable future for Pennsylvania

ACHIEVEMENTS

A new water treatment facility opened in November 2016 in Bloomsburg. Situated above the floodplain, the innovative technology facility represents the largest investment made by the company since operating in Pennsylvania. In 2006, a new \$16.7 million water treatment facility in Hummelstown was brought online. Also situated above the floodplain, it utilizes innovative technology to process water far more quickly than conventional water treatment.

COMMUNITY PROGRAMS

Environmental preservation projects in partnership with watershed associations

Support of disaster relief organizations providing assistance to victims of flooding

Assistance to conservation district programs that emphasize watershed protection

SCOPE OF SERVICES

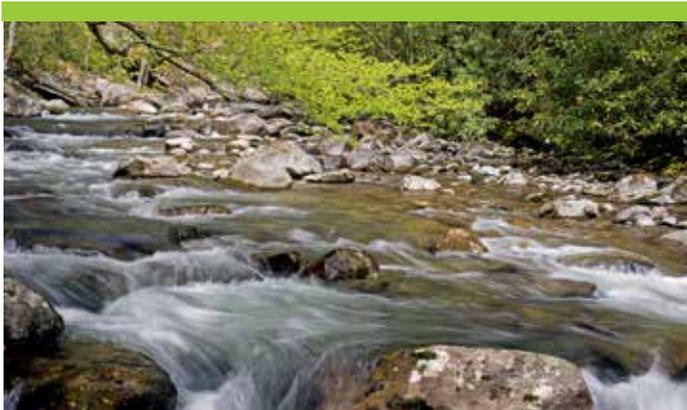

Ownership, operation & management of four geographically separate water utilities serving eight counties. Facilities include five water treatment plants, 28 wells and over 870 miles of water mains.

POPULATION SERVED

166,000 people in 40 communities across central Pennsylvania.

ready for the resource revolution

Pennsylvania

is known as the “Keystone State” for its key role in the development of our nation.

the past and future of Pennsylvania’s water

Just as Pennsylvania is known as the Keystone State for its key role in the development of our nation, SUEZ is likewise recognized for its key role in providing quality water service to diverse communities throughout the state. These suburban communities have been growing steadily as new, advanced technology businesses move in to leverage the respected local work force.

To meet growing water needs, the company has constructed new water treatment facilities to provide the highest quality of water possible. SUEZ’ operations are regulated by the Pennsylvania Public Utility Commission, Pennsylvania Department of Environmental Protection and U.S. Environmental Protection Agency.

Innovative membrane filtration technology is utilized at the water treatment facilities in Bloomsburg and Hummelstown. In providing these services, SUEZ brings to bear its global research and development, and its worldwide experience in operations and maintenance. Both the Bloomsburg and Hummelstown water treatment facilities are built above the floodplain to assure continuous operation during times of future flooding. Both provide water service at a high rate to several of the company’s largest customers.

The Bloomsburg facility serves customers in the Town of Bloomsburg and portions of four adjoining townships. Largest customers include auto carpet manufacturer Autoneum and Bloomsburg University. The Hummelstown facility is one of two surface water treatment facilities that provide water to 15 communities surrounding the City of Harrisburg. One of our largest customers is Fresh Express, located near Hummelstown, which processes fresh fruit and vegetables distributed to several grocery store chains.

SUEZ also serves the West Shore of Harrisburg where water service is provided to seven communities in Cumberland County, including the Borough of Mechanicsburg. Largest customers include The Navy Ships Parts Control Center and Messiah College. The company’s Northeastern Pennsylvania service area comprises portions of Luzerne and Wyoming Counties, including the Borough of Dallas and six other communities.

The company’s more than 90 full-time employees are highly experienced and share a personal commitment to the communities they represent. They assist a variety of organizations focused on environmental preservation and human services. These include Agape in Bloomsburg, the Boys and Girls Club of Harrisburg, Mission Central in Mechanicsburg, the Women’s Center in Bloomsburg and watershed protection associations and conservation districts throughout the eight-county service area.
